The 400/220/33KV and 220/132/33 KV transformers shall be provided with delta connected loaded tertiary windings of 33 KV voltage class and shall be suitably rated to withstand the stresses due to short circuit in the system. Transformer with 3-windings shall be of loaded tertiary design.

Working Group Members - IEEMA The 315 MVA transformers step down the voltage from 400 KV to 220 KV, 6% of the input power 680 MW i.e. around 40 MW power is lost in the transformers. The rest i.e.640 MW is fed to the 220 KV busbar (double main and transfer bus scheme). To increase the reliability of the system the 220 KV busbar is also fed from 2 other substations.
