Record your answer in Table 1. a. Arrival time of the P-wave b. Arrival time of the S-wave c. Difference in the arrival time d. Distance to the epicenter of the earthquake (Use the graph on ESRT page 11 to determine distance based on the difference in the arrival time between P-wave and S-wave) e.

~~Locating the Epicenter of an Earthquake~~

~~Long Term Projects. Investigate the relationships between these temperatures on a daily cycle, as well as long term data for several months. 15. Measure the maximum height of the tides at a nearby location for a month. Graph this change and correlate it with the relative positions of the Earth, sun and moon.~~

~~Unit 2—NYS Earth Science~~

~~The Physical Setting: Earth Science, is related to the field of science called Earth Science. In this course you will be studying the different processes, relationships, mechanisms, and concepts that help us interpret our planet Earth.~~

~~Lab Activity on Earthquakes~~

EARTHQUAKES: Epicenter Determination, Seismic Waves, and Hazards Introduction Earthquakes are vibrations of Earth caused by large releases of energy that accompany volcanic eruptions, explosions, and movements of Earth's crust along fault lines. The earthquake vibrations are waves of energy that radiate through Earth away from the focus. These ...

be able to solve it and get the correct epicenter. Fill in all the information for location #1 and draw the circle. Location #2 & #3 should be left blank.

## ~~Lab Performance Test—Regents Earth Science~~

ANSWER SHEET: EARTH SCIENCE REGENTS - EVIDENCE FOR PANGAEA. Shadow Zone Identify 3 things that happen to the P-wave as it passes through the earth: requires the use of the Seismic Eruption software. Subduction Boundary Lab In this lab activity, you will plot and compare actual earthquake foci data from two areas where subduction is currently occurring.

## ~~Sumatra Earthquake 2004—REGENTSEARTHSCIENCE.COM~~

Lab Period: \_\_\_\_\_ Locating the Epicenter of an Earthquake

Introduction: The epicenter is the point on Earth's surface directly above an earthquake. Seismic stations detect earthquakes by the tracings made on seismographs. Tracings made at three separate seismic stations are needed to locate an earthquake epicenter.

# Read PDF Earth Science Earthquake Lab Answers

Earth scientists everywhere were eager to study the earthquake that rattled the entire planet and generated the tsunami that destroyed so much on the rim of the Indian Ocean basin. As earth science teachers, we viewed the event as a teachable moment ripe with possibilities.

## ~~Regents Earth Science~~

Earth Science Laboratory Exercise 8: Earthquakes and Earth's Interior Answer Sheet Your name: Learning Objectives After you have completed this exercise you should be able to:

- Examine an earthquake seismogram and recognize the P waves, S waves, and surface waves.
- Use a seismogram and travel-time graph to determine how far a seismic station is from the epicenter of an earthquake.

## ~~Lab 10—Earthquake Epicenter Location~~

Skills Practice Lab Finding an Epicenter An earthquake releases energy that travels through Earth in all directions. This energy is in the form of waves. Two kinds of seismic waves are P waves and S waves. P waves travel faster than S waves and are the first to be recorded at a seismograph station. The S waves arrive after the P waves. The time ...

## ~~LAB 8—Earth Science Laboratory Exercise 8 Earthquakes ...~~

The point within the earth where the actual movement takes place is called the focus. As shown in Figure 1, the point on the surface directly above the focus is called the epicenter. An earthquake epicenter can be located from records made of earthquake waves on devices called seismographs. One type of seismograph is a visible recording machine, shown in Figure 2.

## ~~Locating the Epicenter of an Earthquake~~

Lab Activity on Earthquakes A-41 Questions 1. What was happening to the shapes of the foam rubber pieces while you were turning the crank but there was no motion along the fault? Draw one or more diagrams to illustrate your answer. 2. During each earthquake, the top piece of foam rubber made a very rapid change in position. Did
