### Chapter: Stars and Galaxies

A nebula is a large cloud of gas and dust. Gravity can pull some of the gas and dust in a nebula together. The contracting cloud is then called a protostar. A protostar is the earliest stage of a star's life. A star is born when the gas and dust from a nebula become so hot that nuclear fusion starts.

### Evolution Of Stars Worksheets - Learny Kids

Stellar Evolution Diagram Answer Key: Nebula. This is a cloud of dust and gas that can last for millions of years. A nebula consists commonly of about 70% Hydrogen, 28% Helium, and about 2% of other heavier elements. Nebulas rarely start to clump together on their own- often they require an outside force to nudge them into coalescing.
