Full colour and with excellent anatomical and clinical figures throughout, it will provide succinct, authoritative and didactic anatomic and ...

~~Gastrointestinal Anatomy and Physiology~~

Gastrointestinal Tract Anatomy. The gastrointestinal tract in humans begins at the mouth, continuing through the esophagus, stomach, and the small and large intestines. The GI tract is about 9 meters in length. There are many supporting organs, such as the liver, which helps by secreting enzymes that are necessary for the digestion of food.

~~The Digestive System~~

The function of the digestive system is to break down the foods you eat, release their nutrients, and absorb those nutrients into the body. Although the small intestine is the workhorse of the system, where the majority of digestion occurs, and where most of the released nutrients are absorbed into the blood or lymph, each of the digestive system organs makes a vital contribution to this process.

~~Gastrointestinal anatomy and physiology: Video | Osmosis~~

The gastrointestinal tract consists of a long tube, where food travels through, which runs from the mouth to the anus, as well as a number of accessory organs that sprout off the sides of that ...

~~Meet the gastrointestinal tract! | Gastrointestinal system physiology | NCLEX-RN | Khan Academy~~

Physiology of the Digestive System Specifically, the digestive system takes in food (ingests it), breaks it down physically and chemically into nutrient molecules (digests it), and absorbs the nutrients into the bloodstream, then, it rids the body of indigestible remains (defecates).

~~Anatomy and Physiology of Digestive System~~

Digestive system: The alimentary canal and accessory digestive organs. Organs of the digestive system are divided into two main groups: organs within the alimentary canal and accessory digestive organs. The alimentary canal, which is also called the gastrointestinal (GI) tract or gut, is the entire length of tube that winds through the body from the mouth to the anus.

~~Anatomy and Physiology: Gastrointestinal Tract~~

Digestive System Physiology. The digestive system is responsible for taking whole foods and turning them into energy and nutrients to allow the body to function, grow, and repair itself. The six primary processes of the digestive system include: Ingestion of food; Secretion of fluids and digestive enzymes

~~Gastrointestinal Anatomy and Physiology - RN.com~~

Gastrointestinal Anatomy and Physiology. Kathleen M. Stacy. The major function of the gastrointestinal (GI) tract is digestion. It converts ingested nutrients into simpler forms that can be transported from the tract's lumen to the portal circulation and then used in metabolic processes.
