The main categories of PVD processing are vacuum deposition (evaporation), sputter deposition, arc vapor deposition, and ion plating. There are a number of other thin film deposition processes that should be considered for certain applications, for example, a TiN hard coating can be deposited by PVD or chemical vapor deposition (CVD).

ABOUT THE NICKEL INSTITUTE. Nickel Institute (NI) is the global association of the world's primary nickel producers who together account for approximately 85% of worldwide annual nickel production outside China. Our mission is to promote and support the use of nickel in appropriate applications.

generally good to very good adhesion of
coatings; the relative ease of forming
hard and decorative coatings; and the
relatively wide range of useable partial
pressure of reactive gas when forming
stoichiometric films.
