## Hayabusa S

The Hayabusa spacecraft was launched on 9 May 2003 at 04:29:25 UTC on an M-V rocket from the Uchinoura Space Center (still called Kagoshima Space Center at that time). Following launch, the spacecraft's name was changed from the original MUSES-C to Hayabusa, the Japanese word for falcon. The spacecraft's xenon ion engines (four separate units), operating near-continuously for two years, slowly ...

## Hayabusa - Wikipedia

The Suzuki Hayabusa (or GSX1300R) is a sport bike motorcycle made by Suzuki since 1999. It immediately won acclaim as the world's fastest production motorcycle, with a top speed of 303 to 312 km/h (188 to 194 mph).. In 1999, fears of a European regulatory backlash or import ban led to an informal agreement between the Japanese and European manufacturers to govern the top speed of their ...

## Suzuki Hayabusa - Wikipedia

June 13, 2010: The Hayabusa spacecraft releases its 40-centimeter-wide capsule before harmlessly burning up - as planned - in Earth's atmosphere. The capsule parachutes down to the Woomera Protected Area, the world's largest test range, in South Australia, where ground teams recover it the following day. Scientific Instrument(s)

## Missions | Hayabusa

Hayabusa was a Japanese spacecraft that brought back a sample of asteroid material to Earth in 2010, after a mission riddled with technical glitches.

HAYABUSA's journey was unexpectedly long, and the engine's life had finally expired. However, even in the face of this difficult situation, the operation team did not give up, and they combined features of the working engines (of which there were originally four) into one engine, using which they achieved cross control to resume operation.
