High-intensity interval training (HIIT) is not just for the young and healthy. Researchers have found that HIIT can improve health and fitness for just about everyone and has even bigger benefits for older adults. The concept of "HIIT" is pretty simple. You can do anything for 30 seconds or even a couple of minutes.

High-Intensity Interval Training: Benefits and How Often ...  
By now you've heard all the (well-earned) hype surrounding high intensity interval training, or HIIT for short. These short, very intense workouts boost your aerobic and anaerobic fitness, improve insulin sensitivity, burn off dangerous belly fat while helping you maintain lean muscle mass, and of course make you faster and stronger on the bike.

High-intensity interval training - Wikipedia  
High-intensity interval training offers many benefits including improving your cardiovascular health, fitness level, stamina and endurance in addition to burning more fat and calories in less time. While HIIT training can be an intense way to work out, the great news is your level of exertion is relative to your fitness level.

Why interval training may be the best workout at any age ...  
High-intensity interval training (HIIT), also called high-intensity intermittent exercise (HIIE) or sprint interval training (SIT), is a form of interval training, a cardiovascular exercise strategy alternating short periods of intense anaerobic exercise with less intense recovery periods, until too exhausted to continue.
