Cause of Land Degradation and Its Impacts on Livelihoods ...
It causes land degradation through huge loss of top fertile soil along with plant nutrients through runoff water. It reduces the depth of soil where it takes place, depletes the ground water table, limits the moisture storage capacity and feeding zones of the crops, deteriorates the soil organic matter, destroys soil structure and impairs fertility due to nutrient losses.

Land degradation - Wikipedia
Ethiopia is among the poorest of countries and poverty and land and resource degradation appear to feed off each other. The irony is that Ethiopia is a country with high biodiversity and

Economics of Land Degradation and Improvement in Ethiopia ...
Land degradation is the common environmental problem in Ethiopia. It is one of the major causes of low and declining agricultural productivity and continuing food insecurity and rural poverty. In addition, land degradation directly affected the type of plant grown on the area, reduced availability of potable water, lessened volumes of surface water, depletion of aquifers and biodiversity loss.

Land Degradation: 9 Main Causes of Land Degradation
Land degradation here mainly refers to the loss of life-supporting land resource through soil erosion, desertification, salinization, acidification, etc. Deforestation accounts for the major land degradation problem as it results in severe soil erosion, flood, and loss of fertile soil. Eastern Africa including Ethiopia has experienced moderate to severe land degradation problems as shown in ...

LAND DEGRADATION AND REHABILITATION IN ETHIOPIA: A ...
Cause of land degradation . Identification of the cause of land degradation is important in return influence the sustainability of the life and helps to take appropriate measurement to halt it . Table 3.1: Cause of land degradation on HHs farm land . causes Frequency Percent Deforestation 18 27.7 Over grazing 5 7.7

Continuing land degradation: Cause–effect in Ethiopia's ...
Land degradation is a process in which the value of the biophysical environment is affected by a combination of human-induced processes acting upon the land. It is viewed as any change or disturbance to the land perceived to be deleterious or undesirable. Natural hazards are excluded as a cause; however human activities can indirectly affect phenomena such as floods and bush fires.

(PDF) Land Degradation in Ethiopia: Causes, Impacts and ...
Land degradation is a great threat for the future and it requires great effort and resources to ameliorate. The major causes of land degradation in Ethiopia are the rapid population increase, severe soil loss, deforestation, low vegetative cover and unbalanced crop and livestock production. Inappropriate land-use systems and land-tenure policies enhance desertification and loss of ...

Federal Democratic Republic of Ethiopia Ethiopia - Land ...
induced causes of land degradation in Ethiopia are poor farming practices, population pressure, overgrazing, over cultivation, soil erosion, deforestation, salinity and alkalinity problems, and the use of livestock manure and crop residue for fuel as energy resource of the rural households.

Extent & Impact of Land Degradation and Rehabilitation ...
Soil degradation is the loss of land's production capacity in terms of loss of soil fertility, soil biodiversity, and degradation. Soil degradation causes include agricultural, industrial, and commercial pollution; loss of arable land due to urban expansion, overgrazing, and unsustainable agricultural practices; and long-term climatic changes.

Land Degradation: A Challenge to Ethiopia | SpringerLink
Land Degradation and Rehabilitation in Ethiopia Society at large is also suffering from uncertain information about the rates of land use change and land degradation. The paper suggests some rules of thumb for identifying the priority areas for government and donor intervention, including the need for targeted research on the productivity

(PDF) Land Degradation in Ethiopia: Causes, Impacts and ...
The major causes of land degradation in Ethiopia are the rapid population increase, severe soil loss, deforestation, low vegetative cover and unbalanced crop and livestock production. Inappropriate land-use systems and land-tenure policies enhance desertification and loss of agrobiodiversity.

Land degradation: a challenge to Ethiopia.
Land degradation is the common environmental problem in Ethiopia. It is one of the major causes of low and declining agricultural productivity and continuing food insecurity and rural poverty. In addition, land degradation directly affected the type

LAND DEGRADATION IN ETHIOPIA: ITS EXTENT AND IMPACT
Land Degradation and Development published by John Wiley & Sons, Ltd. Introduction Soils have played significant roles in the earth's life-support system through the provision of a multitude of essential ecosystem services (i.e. provisioning, regulating, cultural and supporting services) to humans and the environment (Keesstra et al ., 2016b ; Schwilch et al ., 2016).

Land Degradation - an overview | ScienceDirect Topics
Abstract. Land degradation is an important problem in Ethiopia, with more than 85 % of the land degraded to various degrees. Recent estimates using satellite imagery show that land degradation hotspots over the last three decades cover about 23 % of the land area in the country.

Deforestation in Ethiopia: Causes, Impacts and Remedy
The major causes of land use and cover change (LUCC) and land degradation in the area were population and livestock growth in regions of limited resources, unsustainable farming techniques, the Ethiopian land tenure system and poverty.
