Microstrip and Printed Antennas: New Trends, Techniques ...
This book focuses on new techniques, analysis, applications and
future trends of microstrip and printed antenna technologies,
with particular emphasis to recent advances from the last
decade Attention is given to fundamental concepts and
techniques, their practical applications and the future scope of
developments. Several topics, essayed as individual chapters
include reconfigurable antenna ...

Microstrip and Printed Antennas: New Trends, Techniques ...
The most common type of microstrip antenna is the patch
antenna. Antennas using patches as constitutive elements in an
array are also possible. A patch antenna is a narrowband, wide-
beam antenna fabricated by etching the antenna element

New Types of Microstrip Antennas for the Applications. Typically, patch antennas are narrowband and their Q factor is inversely proportional to frequency. The main reason for the high Q factor is that patch antennas are essentially circuits printed on a relatively thin substrate: the higher the dielectric, the higher the Q factor.

This updated third edition of this popular book covers all types of printed microstrip antenna design, from rectangular to circular, broadband and dual band, and millimeter wave microstrip antenna to microstrip arrays. The book features new analysis of rectangular and circular microstrip antenna efficiency, and surface wave phenomena.

A: A microstrip antenna, also called a patch antenna or printed antenna, is an antenna which is primarily a two-dimensional flat structure (Figure 6. In its simplest form, it uses a conducting "patch" one-half wavelength long, so that the metal surface acts as a resonator similarly to the half-wave dipole antennas.

New Types of Microstrip Antennas for UHF Applications

1Abstract—A new microstrip fed monopole antenna with simple planar structure of size $24 \times 28 \times 1.6$ mm³ is presented for ultra-wideband (UWB) applications. The antenna structure consists of V-shaped patch, microstrip-fed line and partial

Book Abstract: This book focuses on new techniques, analysis, applications and future trends of microstrip and printed antenna technologies, with particular emphasis to recent advances from the last decade In this book, the authors address topics such as reconfigurable antennas, ultra-wideband (UWB) antennas, reflectarrays, antennas for RFID systems and wearable antennas for body area networks.

A New Design and Analysis of Microstrip-fed Ultra-wideband ...

In the simplest sense, a microstrip antenna is an antenna that is printed directly on a PCB in a microstrip configuration. Patch antennas are just one type of microstrip antenna. A patch antenna is placed above a ground plane, which creates an image of the radiating microstrip element on the surface layer.
