Linear Algebra (4th Edition) View more editions 90 % (3076 ratings) for this book. By the first equation $c = 2$, but the second gives $c = 4$. Therefore, the system has no solution, and the vectors are not parallel. All the equations give $c = -3$. Therefore, the system has a solution, and the vectors are parallel. All the equations give $c = -1$.

So we're down to the two cases where $x = 1$ and one of y or z equals 1 and the other equals 0. In this case both sides equal 1. So $x(y + z) = (x + y)z$ in all eight cases. Exercise 6: Prove that if two homogeneous systems of linear equations in two unknowns have the same solutions, then they are equivalent.
