will find a solution to the minimization constraint with $C(x) = \text{some constant}$, but not zero. Fixing $C = 0$ can be accomplished by additionally requiring the condition, $\lambda (F - C) = 0$: Putting these together, it appears that $F - C$ is a function of x_1, \dots, x_n and λ , and that this must then be minimized. Thus, the n -

Pokey

This is a book on statistical mechanics written for physicists. While most books dedicate a chapter or so to the treatment of stat mech. of quantum systems, this book uses the statistics of quantum systems as its foundations.

Pathria is also the author of a well-known graduate text book on Statistical Mechanics, which has recently appeared. Pathria is known for his work on Superfluidity in liquid helium, Lorentz transformation of thermodynamic quantities, a rigorous evaluation of lattice sums and finite-size effects in phase transitions.
