Abstract. Epidemiologic evidence on the relationship between organic solvents and cancer is reviewed. In the 1980s, more than a million persons were potentially exposed to some specific solvents in the United States; in Canada, 40 percent of male cancer patients in Montreal had experienced exposure to solvents; in the Finnish population, one percent was regularly exposed.

IARC [1989]. IARC monographs on the evaluation of carcinogenic risks to humans: some organic solvents, resin monomers and related compounds, pigments and occupational exposures in paint manufacture and painting. Vol. 47. Lyon, France: World Health Organization, International Agency for Research on Cancer. Koudela K, Spazier K [1979].

Organic solvents and cancer | SpringerLink

A rubber solvent (special boiling range solvent) induced chromosomal aberrations but not sister chromatid exchange in cultured human cells. Another special boiling range solvent did not induce chromosomal aberrations in cultured mammalian cells, gene conversion in yeast or mutation in bacteria.

Some Organic Solvents, Resin Monomers and Related ...

Get this from a library! Some organic solvents, resin monomers, and related compounds, pigments, and occupational exposures in paint manufacture and painting.. [IARC Working Group on the Evaluation of Carcinogenic Risks to Humans.; International Agency for Research on Cancer.]

Some Organic Solvents, Resin Monomers and Related ...

Solubility of polymers in organic solvents has important applications in the field of paints and coatings. In a simpler approach valid for slightly polar solvents, the capacity of a solvent to dissolve a polymer can be estimated by means of the Hildebrand solubility parameter (see regular solution theory in Section 6.3.3) defined as the square root of the cohesive energy:

IARC Monographs on the Evaluation of Carcinogenic Risks to ...

Solvent dyes come in red, yellow, blue, and green colors. A characteristic physical property of a solvent dye, like we said above, is solubility in an organic solvent. Some of the typical solvents are alcohols, ethers, ketones, aliphatic and aromatic hydrocarbons, oils, fats, waxes, and chlorinated hydrocarbons.
