10.5%) metals as the main non-iron constituents. It is an austenitic stainless steel. It is less electrically and thermally conductive than carbon steel and is essentially-magnetic but less magnetic than steel.

Stainless steel: Understanding the difference between 302 ...

Get Free Stainless Steel 304 Ak Steel Holding

What is Type 304 stainless steel and what's it used for? Type 304, with its chromium-nickel content and low carbon, is the most versatile and widely used of the austenitic stainless steels. Its alloys are all modifications of the 18% chromium, 8% nickel austenitic alloy.

Get Free Stainless Steel 304 Ak Steel Holding

304/304L-S-8-01-07 AK Steel Type 304 is a variation of the basic 18-8 grade, Type 302, with a higher chromium and lower carbon content. Lower carbon minimizes chromium car-bide precipitation due to welding and its susceptibility to intergranular corrosion. In many instances, it can be used in the "as-welded" condition, while Type 302
