The main four types of reactions are direct combination, analysis reaction, single displacement, and double displacement. If you're asked the five main types of reactions, it is these four and then either acid-base or redox (depending who you ask). Keep in mind, a specific chemical reaction may fall into

Types of Chemical Reactions (With Examples)

# Download File PDF Types Of Reactions Study Guide

## Answers

The five general types of reaction are combination, decomposition, single-replacement, double-replacement, and combustion. Not all chemical reactions fit uniquely into only one category.

Occasionally, a reaction may fit equally well into two categories. Nevertheless, recognizing a reaction as a particular type is useful.
